

```
import yfinance as yf

ticker = 'AAPL' # Replace with your ticker
stock = yf.Ticker(ticker)

# Fetch stock news
news = stock.news

# Print the titles and links of the top news articles
for article in news:
    print(f"Title: {article['title']}")
    print(f"Link: {article['link']}\n")
```

User can add stocks to their watch list, and track their performance in a similar display to their portfolio
